

FRONT LIFT ALIGN ARMS

Toyota LandCruiser 200 Series

A complete arm replacement that gives camber and caster adjustment in one product!

When these vehicles are lifted they run out of Camber and Caster adjustment and driven by the need for accurate wheel alignment, SuperPro has designed a product that will provide the solution.

The trend to fit accessories, larger tyres & rims and suspension lift kits to the modern 4 X 4 has exposed the lack of any real O.E adjustment. Left unresolved this leads to undesirable handling issues and premature tyre wear.

The new Lift-Align Arms from SuperPro Roll Control are manufactured from a hybrid of high strength, cold formed steel tube and forged steel, with an adjustable position Ball Joint and fitted with SuperPro bushes.

The SuperPro Lift-Align Arms allows for:

- +/- 2 Degrees of Camber Adjustment
- 0 to +4 Degrees of Caster Adjustment
- 0.8 Hours installation Time per side.

Easy to follow instructions for accurate Wheel Alignment setup.
