

**NEW RELEASE**

## **HOLDEN VE COMMODORE SPORT ALIGN ARMS**

**SuperPro have developed and released the new Sport-Align Front Arms for the VE Commodore in response to the need for an upgrade to the standard OEM style rubber bushings and ball joint.**

**Both Arm Kits come supplied and fitted with SuperPro Polyurethane Bushings as well as both Ball Joints.**

The front suspension bushings in the VE Commodore have always been notorious for excessive movement, in particular the front caster bush, which leads to a multitude of undesirable steering, braking, alignment and tyre wear issues. Add to that the trend by OEM Engineers to incorporate the ball joints into the arm assemblies, requiring those customers wanting to upgrade to superior bushings to purchase OEM style arms and then replace the bushings with SuperPro.

That is now a thing of the past, SuperPro Roll Control Sport-Align Arms are not only the perfect Performance upgrade, but the logical Repair replacement for VE Commodore owners wishing to restore that "New Car" feel.
