

New Release

BMW 1 Series E81, E82, E87 & E88

SuperPro have designed and released a complete set of up rated polyurethane bushes for all of the front & rear suspension arms. The front radius arm to chassis bushing has caster adjustability built in and camber adjustment is also incorporated into the front lower inner control arm bushings. The front and rear sway bars were redesigned with adjustable, uprated sway bars. The front sway bar is available in 27mm and is two position adjustable; it comes with uprated links and SuperPro bushings. The rear bar is available in 20mm with 2 position adjustability.

The end result of installing the complete SuperPro package is a car that has lost the vagueness when turning into corners and is far more predictable on the limits of cornering. With all the rear sub frame & differential mount bushings installed the rear end is controlled, but still smooth to drive and shows no signs of harshness.
