

New Release

Toyota 86 & Subaru BRZ Rear Sway Bar Mount Brace

SuperPro Roll Control has released a support brace kit for the rear Sway bar mount on these vehicles, to compliment the Roll Control Sway Bar range.

Movement in the Sway Bar Mounting point can reduce the effectiveness of the Sway Bar.

This brace is designed to add strength and eliminate any additional movement or fatigue in the O.E mounting point when a larger diameter Sway Bar is installed.

A flat plate design, made from mild steel securely braces the sway bar mount to the lower control arm pivot point on the chassis, without compromising clearance to larger diameter performance exhaust systems.

AVAILABLE NOW!!
