

SuperPro GMH VE-VF Engine Mounts

The latest addition to the SuperPro ever expanding range now includes Engine Mounts.

The formulation of the new Polyelast™ material has opened up a whole new range of options and the next part to get the treatment is the GMH V6 and V8 engine mount for 2006-On vehicles.

The Engine Mount has been optimised for longevity, durability and performance by utilising the new Polyelast™ material to reduce the overall movement of the engine, without compromising NVH.

The SuperPro Polyelast™ Engine Mount has some very clever engineering “built in” to produce the best engine mount available for these vehicles.

The SuperPro Polyelast™ Engine Mounts perform superbly in a standard application, but they really shine in a high performance application. With the movement controlled by the internals of the mount and the superior durability of the Polyelast™ material even the highest performance vehicles will benefit from a mount that still maintains the “original” feel!

So now, one mount does it all and is backed by the SuperPro Lifetime Warranty!

TRC2000 – Contains Left & Right Engine Mount

Suits all GMH VE-VF Series vehicles
