

New Generation of SuperPro Press Tool Kits

Every so often along comes a new tool or gadget that makes you think about the way things are done in your workshop. The SuperPro Press Tools are one of those tools.

Most old and new suspension bushings are pressed out and in with old bearing shells, sockets or anything you can find. This creates a safety issue; given that heat treated steel will shatter under stress.

PRESSKIT1

The assortment of sleeves that make up the SuperPro Press Tool Kit are made from mild steel to allow distortion or crush when over-pressed.

Features:

- 18 Mild Steel Sleeves.
- Sizes 18mm to 113mm OD, in 5mm Increments.
- Easily Machined to suit specific jobs.
- Sleeves are individually numbered for single replacement.
- Sizes are matched to suit common bushing sizes.

PRESSTOOL1

Is a new addition, these tools are designed to negate the need for plates or other improvised bits and pieces. They are designed to fit perfectly into the press dies of PRESSKIT1.

Available separately to allow PRESSKIT1 owners to purchase the extra tooling.

PRESSKIT2

This is the complete package, both tools together to makes any press job easy and safe!

AVAILABLE APRIL 2016
