

New Release

Toyota F86 / Subaru BRZ Rear Sway Bar Links

SuperPro has now released Rear Sway Bar Links, designed to work perfectly with the SuperPro Roll Control Range of rear adjustable Swaybars.

The O.E links will not work correctly and fail due to high angular loads generated from an uprated, adjustable Swaybar.

Product Features:

- A unique articulated lower mount designed to work with O.E and our adjustable Swaybar.
- A split crush tube design has been incorporated for positive, rattle free location in the lower control arm.
- The lower bushing has been engineered to absorb the shock loading of a working Swaybar.
- The fixed length ball end attachment to the Swaybar has been designed to never come loose.

Pair of SuperPro Rear Swaybar Links - SPF3915K
