

Ford FG Complete Upper Control Arm Kit

The new Upper Control Arms for the Ford FG Series are the latest addition to the ever expanding SuperPro Roll Control Complete Arm range.

These arms utilise the new Polyelast™ material in the bushings and are manufactured from a high strength, light weight alloy material and come complete with a heavy duty ball joint.

By using the Polyelast™ material and eliminating the voiding of the O.E style rubber bushing; these arms have been optimised for longevity, durability and performance, without any unwanted NVH.

These arms are perfectly suited as a standard replacement and are an upgrade from the factory arms, eliminating the undesirable arm movement to maintain better steering geometry in all driving conditions.

In a performance lowered application, these arms offer an alternative to the SuperPro Bushings for those seeking control without further compromising the ride quality that normally is associated with lowered springs and firmer shock absorbers.

- **TRC1008 – Control Arm Upper Assembly Kit**

Kit Contains:

- Left & Right Control Arms,
