

SuperPro Alloy Arm Kit Upgrade - SUBARU GC 1992 - 2000

SuperPro have released the new Alloy arm upgrade for the GC WRX, these arms are a complete package and include both SuperPro Anti-Lift Bushes in the Rear Bracket and Front Bushings.

This arm package when fitted will increase the front track by 24mm and provide a 4kg or 38% unsprung weight saving over the original Subaru arms.

Attention to the camber settings must be taken when installing the ALOY0008K to ensure that tyre and guard contact is avoided.

Camber settings with the ALOY0008K fitted to the vehicle:

- The factory adjusters allow for adjustment range of -3.25° to -1.75° to be achieved.
- A vehicle with standard top mounts using a Camber Bolt, allows the adjustment range to be extended to -3.25° to $+0.3^{\circ}$.
- For a vehicle fitted with adjustable top mounts, camber correction is easily achieved.

These arms have been designed to maximise the static caster gain over the factory arms and, as always with SuperPro bushings, positive arm location ensures that dynamic alignment is maintained.

In addition, the high strength Alloy arms are more rigid and less likely to flex than the OEM steel arm, which maintains static wheel alignment settings even under the most demanding of circumstances.

Part Number: ALOY0008K Now Available!
